31. Mobile Design Rules

Responsive from 320px upwards.

Bottom navigation for customers.

Large touch targets.

One-handed usability.

Fast-loading images.

Sticky Add-to-Cart.

32. Accessibility

Keyboard navigation.

Screen reader support.

High contrast mode.

Alt text for all images.

Visible focus states.

Accessible forms.

33. Design Principles

1. Premium visual quality over clutter.
2. Every interaction should feel smooth and intentional.
3. Large, high-resolution product photography is the primary focus.
4. Important actions (Buy Now, Add to Cart) remain easily accessible.
5. Admin tools prioritize efficiency and clarity.
6. Seasonal campaigns should be manageable without developer involvement.
7. All content (banners, prices, discounts, collections, notifications) should be editable through the admin dashboard.
8. Components should be reusable, consistent, and documented in a design system.
9. Every page should support SEO and fast performance.
10. The UI should be built to accommodate future expansion into mobile apps and additional product lines without redesigning the core experience.
