

Master Miro Ai Board Prompt

SUMMARY

Create a complete Miro board that serves as the central planning workspace for designing, developing, testing, deploying, and scaling a premium botanical art and handcrafted resin jewellery e-commerce platform.

PROJECTS

Luxury Botanical Art E-Commerce Platform | The completed Miro board should function as a comprehensive project command center, enabling product planning, UX design, technical architecture, development coordination, testing, deployment, and long-term product evolution from a single workspace.

- Objective: Create a complete Miro board for end-to-end product lifecycle support across designers, developers, business owners, QA engineers, marketers, customer support, and administrators.
- Board organization includes frames for Project Vision, Business Strategy, Brand Identity, Information Architecture, Website Structure, Customer Journey, System Architecture, Database & API Planning, Development Roadmap, Testing, Deployment, Scaling, Maintenance, and Future Features.
- Frame 1 — Project Overview: Project Vision, Mission Statement, Business Goals, Success Metrics, Target Audience, Core Features, Future Expansion, Competitive Advantages, Project Scope, Out-of-Scope Features, Project Constraints, Assumptions, Business Risks, Technical Risks, Dependencies, Stakeholders, KPIs.
- Frame 2 — Brand Strategy: Brand Personality, Brand Values, Brand Voice, Design Philosophy, Visual Style, Color Direction, Typography Direction, Photography Style, Illustration Style, Iconography, Animation Philosophy, Customer Emotional Journey, Luxury Positioning, Trust Building, Differentiators.
- Frame 3 — User Personas: Luxury Buyer, Wedding Customer, Gift Shopper, Corporate Buyer, Returning Customer, Administrator, Customer Support Agent, Inventory Manager, Marketing Manager, Super Administrator; each with Goals, Motivations, Pain Points, Technical Skills, Shopping Behavior, Preferred Devices, Accessibility Needs, Buying Frequency.
- Frame 4 — Customer Journey Map from Discovery to Referral, including emotional state, frustrations, opportunities for improvement, and business touchpoints.
- Frame 5 — Information Architecture covering Home, Shop, Categories, Collections, Products, Blogs, About, Contact, Support, FAQ, Policies, Authentication, Customer Dashboard, Admin Dashboard, with parent-child links and nav types.
- Frame 6 — Responsive Experience for Android, iPhone, iPad, laptop, desktop, and ultra-wide devices, documenting navigation, layout, scaling, interactions, orientation, and performance considerations.
- Frame 7 — Complete Feature Map across Customer, Admin, System, and Future categories, including authentication, shopping, payments, orders, analytics, security, CI/CD, AI assistant, mobile app, marketplace, and more.
- Frame 8 — Admin Module Map across dashboard, orders, products, inventory, customers, support, SEO, analytics, settings, permissions, notifications, audit logs, with inputs/outputs/dependencies/actions.
- Frame 9 — Database Planning with entities and relationships including users, roles, permissions, products, orders, coupons, payments, reviews, wishlist, inventory, audit logs, and settings.
- Frame 10 — API Planning by modules (Authentication, Products, Orders, Payments, Customers, Inventory, Media, Support, Coupons, Notifications, Admin) with endpoint purpose, method, auth, responses, and errors.
- Frame 11 — Security Architecture layers including authentication, authorization, RBAC, session management, rate limiting, validation, injection/XSS/CSRF protection, secrets, encryption, backups, monitoring, audit logs, and incident response.
- Frame 12 — Design System documentation for tokens, typography, spacing, grid, breakpoints, components, charts, animations, interaction states, and accessibility rules.
- Frame 13 — Content Management for editable site areas (homepage, banners, collections, products, blogs, notifications, coupons, footer, policies, SEO, media, FAQ, testimonials, newsletter), with admin-editable highlighting.
- Frame 14 — Development Roadmap milestones from planning and research through design, frontend/backend development, authentication, database, admin panel, payments, testing, SEO, optimization, deployment, launch, support, and future features.

- Frame 15 — Testing Strategy including unit, integration, API, E2E, accessibility, performance, security, responsive, browser compatibility, regression, UAT, and load testing.
- Frame 16 — Deployment Pipeline: Development → GitHub → Pull Request → Code Review → Automated Tests → Staging → QA → Production → Monitoring → Maintenance, including rollback and backup checkpoints.
- Frame 17 — Analytics & KPIs: visitors, conversion rate, AOV, revenue, orders, bounce rate, CLV, repeat purchases, abandoned carts, product/campaign performance, customer satisfaction, support resolution time.
- Frame 18 — Future Roadmap: AI recommendations/search/support/SEO, loyalty, gift cards, wholesale portal, marketplace, native mobile apps, AR preview, voice search, multi-language, multi-currency, international shipping, subscription boxes.
- Visual requirements: color-coded sticky notes, category icons, dependency/workflow arrows, labeled containers, spacing, legends, non-overlapping connectors, and executive-level cleanliness.
